Talley and Cielo Networks™ Ride the Future on SkyLink

SANTA FE SPRINGS, CA-- August 25, 2009-- SkyLink point-to-point digital microwave radio solutions provide a higher level of performance, reliability and flexibility for licensed microwave applications; their easy adaptability and scalability are ideal for today's evolving network requirements.

In an effort to continue to meet our client's ever growing demand for Carrier Class and Enterprise Data and voice services, Talley is pleased to announce the addition of Cielo Networks™ SkyLink systems to our family of products lines.

Cielo Networks™ SkyLink system's wide capacity scalability, IP & TDM payload interface flexibility, superb reliability and availability in all FCC, NTIA, and ETSI licensed PTP microwave frequency bands from 6 to 39 GHz, makes it the ideal "future proof" PTP microwave system on the market today.

"The market's expectation for delivery on licensed microwave radio has evolved into very short lead times, much like license-exempt band radio products," says Rhys Fernandez, Talley Broadband Sales Manager, "Cielo's commitment to customer service and on time equipment deliveries is key in the continual success of our ability to service our customers."

SkyLink Point-to-Point (PTP) microwave applications include fixed wireless access, wireless network backhaul, enterprise, government, public safety networks, cable TV MSOs, and critical communications circuit redundancy

"Cielo Networks specifically selected Talley as a distribution partner due to the close similarity in our value systems and business priorities: passionate customer focus, veracity of commitments, solution oriented emphasis, technical competence, and commitment to quality in product and service," says Gordon Moller, President of Cielo Networks, "Working with Talley is the ideal way for us to bring our SkyLink system and our best in class delivery times to the wireless marketplace, and we are delighted to be partnered with them."

As new advanced solutions and applications are being developed and deployed in the telecom market, the demands for higher bandwidth, low latency networks and true quality of service are increasing. Talley recognizes these demands and will continue to grow our product portfolio to meet our customers wireless communications requirements.

About Talley: Talley, Inc. is a leading distributor of wireless communications infrastructure and mobile products. Talley's corporate offices are in Los Angeles, CA, with stocking facilities in Dallas, Kansas City, Los Angeles (2), Phoenix, Sacramento, Seattle and now, New Braunfels. Talley was founded in 1983 and is a privately held family-owned company. For more information please visit: www.talleycom.com.

About Cielo: Cielo Networks™ Inc. is a rapidly growing privately held U.S. company that serves the point to point wireless infrastructure segments of the telecom & broadband networking markets. Based in Southlake, Texas, the company develops & supplies fully integrated microwave radio systems through selected distribution and value-added reseller partners.
